DETAILED ACTION

1. This is a notice of allowance in response to the applicant's communication filed on September 01, 2009.

Drawings

2. Subject to the conditions and requirements of this paragraph, if all or a portion of the specification or drawing(s) is inadvertently omitted from an application, but the application contains a claim under § 1.55 for priority of a prior-filed foreign application, or a claim under § 1.78 for the benefit of a prior-filed provisional, nonprovisional, or international application, that was present on the filing date of the application, and the inadvertently omitted portion of the specification or drawing(s) is completely contained in the prior-filed application, the claim under § 1.55 or § 1.78 shall also be considered an incorporation by reference of the prior-filed application as to the inadvertently omitted portion of the specification or drawing(s).

The drawings filed on December 29, 2005 as a replacement sheet contains figures 1 and 2 inadvertently missing figures 3-6 as outlined in the specification and also filed together in the Certified Copy of Foreign Priority application on December 29, 2005. Corrected drawing must be submitted under 37 CFR 1.57.

EXAMINER'S AMENDMENT

3. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR

1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

4. The applicant's representative Brett A. Valiquet (Reg. No.: 27,841) authorized the following examiner's amendment on September 08, 2009.

The application has been amended as follows:

Amendments to the claims:

1-50. (cancelled)

51. (new) A method for printing of sensitive data, comprising the steps of:

at a workstation encrypting the sensitive data to be printed;

transferring the encrypted sensitive data to be printed along with non-sensitive data to be printed to a printing device having a printing unit;

decrypting the sensitive data to be printed to create decrypted sensitive data in an immediate temporal succession execution with converting the decrypted sensitive data to be printed into control signals for activation of the printing unit via rastering of the data into one or more raster images representing the control signals;

storing the decrypted sensitive data in a non-volatile memory such that the decrypted sensitive data are distributed in a plurality of memory segments of the non-volatile memory, and storing a relationship of the memory segments in said non-volatile memory in a volatile memory as relationship data independently of the stored decrypted sensitive data so that without said

relationship data, the decrypted sensitive data stored in said memory segments is not readable;
and

printing the non-sensitive data, and also printing the decrypted sensitive data based on the relationship data, with the printing unit on a recording medium.

52. (new) The method according to claim 51 wherein the decryption and the conversion into control signals is executed in a controller for activation of a character generator.

53. (new) The method according to claim 51 wherein the print data to be printed are transferred to the printing device in the form of a print data stream, the print data stream being converted into an intermediate language in the printing device, and the print data being converted into the control signals.

54. (new) The method according to claim 51 wherein the sensitive data and the non-sensitive data are connected into one data unit before transfer to the printing device.

55. (new) The method according to claim 51 wherein the sensitive data are identified in the data unit via markings.

56. (new) The method according to claim 54 wherein a layout that comprises regions to receive sensitive data is generated using the non-sensitive data.

57. (new) The method according to claim 54 wherein the sensitive data are already encrypted before combination with the non-sensitive data into said one data unit.

58. (new) The method according to claim 51 wherein the sensitive data are encrypted after combination with the non-sensitive data into said one data unit.

59. (new) A system for printing sensitive data which have been encrypted, comprising:

a printing device having a printing unit connected to a controller, said controller receiving said encrypted sensitive data along with non-sensitive data;

said controller comprising a decryption module, a non-volatile memory, a relationship data volatile memory, and a converter which converts decrypted sensitive data from said decryption module in immediate temporal succession execution into control signals for activation of said printing unit, said control signals activating the printing unit via rastering of the data into one or more raster images reprinting the control signals; and

said controller storing the decrypted sensitive data in said non-volatile memory such that the decrypted sensitive data are distributed in a plurality of memory segments of the non-volatile memory, and storing a relationship of the memory segments in said non-volatile memory in said relationship data volatile memory as relationship data independently of the stored decrypted sensitive data so that without said relationship data, the decrypted sensitive data stored in said memory segments is not readable.

60. (new) The system according to claim 59 wherein the printing unit comprises a character generator.

61. (new) The system according to claim 59 wherein the controller comprises at least one raster module as said converter.

62. (new) The system according to claim 59 wherein the controller comprises a combined decryption and raster module.

63. (new) The system according to claim 59 wherein a sensor for detection of recording media with predetermined security features is arranged on a transport path for recording media in a region before the printing unit such that the printing of the sensitive data can be stopped given detection of recording media without security features.

Reason for allowance

5. After consideration of the applicant's remark filed on September 01, 2009 in response to the Office Action mailed on June 15, 2009 and through examination of claims 51-63 with respect to the prior arts in record and further search, the claims have been found in condition for allowance.

6. The following is an examiner's statement of reasons for allowance:

Claims 51 and 59 include the following features of a method and a system for printing of sensitive data which are not taught or further suggested and would not have been obvious over prior arts of record and these claimed features are: Decrypting the sensitive data to be printed to create decrypted sensitive data in an immediate temporal succession execution with converting the decrypted sensitive data to be printed into control signals for activation of the printing unit via rastering of the data into one or more raster images representing the control signals; storing the decrypted sensitive data and distributing them in a plurality of memory segments of the non-volatile memory, and storing a relationship of the plurality of memory segments in said non-volatile memory in a volatile memory as relationship data independently of the stored decrypted sensitive data so that without said relationship data, the decrypted sensitive data stored in said memory segments is not readable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. See the notice of reference cited in form PTO-892 for additional prior art.
